Total Credits for the programme = 19 +18+16+16=69

#### **List of Programme Electives:**

Course Code	Name of Course
Elective 1	
18COE11	Multimedia Compression Techniques
18COE12	Advanced Communication Networks
18COE13	Wireless Sensor Networks
Elective II	
18COE21	RF and Microwave Circuit Design
18COE22	Optical Networks
18COE23	Satellite Communication
Elective III	
18COE31	Wireless and Mobile Communication
18COE32	Pattern Recognition and Machine learning
18COE33	Voice and data networks
Elective – IV	
18COE41	Spread Spectrum Communication
18COE42	MIMO System
18COE43	High Performance Networks
Elective –V	
18COE51	Cognitive Radio
18COE52	Internet of Things
18COE53	VLSI for Wireless Communication
Elective -VI	
18COE61	Remote Sensing
18COE62	Wavelet signal processing
18COE63	Bio Mems
18COE64	Big Data Technology

#### **List of Audit Courses:**

Course Code	Name of Course
Audit-I	
18AC01	English for Research Paper Writing
18AC02	Disaster Management
Audit-II	
18AC05	Constitution of India
18AC06	Pedagogy Studies
18AC08	Personality Development through Life Enlightenment Skills.

18COC	11	STATISTICAL INFORMATION PROCESSING	L T P C 3 0 0 3
	Objectiv	es: uce various decision making system, Filtering techniques and Statisti	cal operations.
<u>1.</u>	To introd	t knowledge on Estimation Theory.	
2.	To goin k	nowledge on Information Theory.	
3	TO gain		9 + 0
l Imit 1		RANDOM SIGNAL MODELLING AND DECISION THEORY	
Testino	r: Bavesia	ith random input – Forward and Backward Predictions – Levinson Du in Hypothesis Testing – Minimax Hypothesis Testing – Neyman-Pea	irson Hypothesis Testing –
Compo	site Hypo	thesis Testing.	
		ESTIMATION THEORY	9 + 0
Estima	ation Mini	<b>ESTIMATION THEORY</b> nood Estimation – Generalized Likelihood Ratio Test – Criteria for mum Mean – Square Error Estimate – Minimum Mean Absolute steriori Estimate – Multiple Parameter Estimation Best Linear Unbiase ursive Least-Square Estimator.	Value of Error Estimate – d Estimator – Least-Square
Loanie	40,000		9 + 0
Unit II	1	SPECTRAL ANALYSIS	
Estima modifi	ated autod ication – F	SPECTRAL ANALYSIS  correlation function – Periodogram – Averaging the periodogram (Bar Parametric method – AR(p) spectral estimation and detection of Harm	ionic signals.

7. Simulation of change of the radius and length of dipole wire on frequency of resons					
7. Simulation of change of the radius and length of dipole wire on frequency of resons		_		_	_
Cimulation of augustanting full	nce	of	fanti	enr	18
Simulation of quarter wave, full wave antenna and comparison of their parameters					
8. Study the effect of the variation of phase difference beta between the elements of	he a	ırr	av o	n t	he
radiation pattern of the dipole array.					
9 Study the effect of change in distance between elements of array on radiation pattern of	dipo	ole	arra	ıy.	
TO Simulation of monopole antenna with and without ground plane. Study the effect of t	ne h	ei	ght c	of t	ne
monopole antenna on the radiation characteristics of the antenna.	_		•		
Course Outs	(P)=	4	5 Pei	rio	st
Course Outcomes:					
Upon completion of this course, the students will be able to :  CO1 : Design and study the radiation pattern of antennas and arrays					
and allays					
CO4 : Understand the impact of variation in antenna parameters in radiation pattern.  Reference Books:

			0	0	4	2
Course	e Obje	ctives:				
1.	To im	part knowledge for implementing various DSP algorithm.				
2	To ga	in knowledge on signal multirate processing.				
3	To im	plement FIR and IIR filters.				
EXPER	RIMEN	rs				
1.	Deter	mination of Power Spectrum of a given signal.				
2.	Simul	ation of LP and HP FIR filter for a given sequence				
3.	Imple	mentation of LP and HP IIR filter for a given sequence.				
4.		ration of Sinusoidal signal through filtering.				
5.		ration of DTMF signals.				
6.		ation of Decimation Process.				
7.	1	ation of Interpolation Process.				
8.	Simu	ation of I/D sampling rate converters.				
9.	Simu	ation of Impulse Response of First Order and Second Order System				
10.	Simu	ation of Pseudorandom noise sequence.				
11.	Squa	re, Ramp signal Generation Using a Lookup Table.			-	
		Total (F	·)= ·	15	Реги	oas
Cours	e Outo	omes:				
Upon		tion of this course, the students will be able to :				
CO1	T:   [	Develop and experiment coding from basic mathematical operations to complex op	erati	ons	in si	gnal
	r	rocessing.				
CO2	: \	/isualize the amplitude and phase spectrum of the signal in frequency domain.				
CO3		Simulate FIR and IIR filter using MATLAB.				
CO4	: 1	Inderstand the properties of discrete time signals.

18COE11   MULTIMEDIA COMPRESSION TECHNIQUES		Т	P	С
Course Objectives:	3	o	0	3
Course Objectives.				<b>L</b>
1. To study the basics of various data coding techniques.			• • • • • • • • • • • • • • • • • • • •	
2. 10 gain knowledge on various audio compression techniques				
3. To understand various image and video compression techniques.				·
Unit I INTRODUCTION		9	+	0
Compression Techniques – Overview of information theory - Lossless and Lossy coding-	Modeling	and	Cod	ina
- Taxonomy of compression techniques – Rate distortion theory - Huffman coding – Non-t — Adaptive Huffman coding – Applications of Huffman coding.	Binary Hเ	ıffmai	n cod	les
Applications of Hullman coding.				
Unit II ARITHMETIC CODING AND DICTIONARY TECHNIQUES				
Introduction - Coding & seguence - Generating designaring the term of		9	+	0
		ila an	- codi:	~~
<ul> <li>Run length coding – Comparison of MH, MR, MMR and JBIG - Scalar and Vector Quan</li> </ul>	itization	iic en	COGII	ıy
		9	+	0
Audio compression techniques - Frequency domain and filtering - Basic sub-band coding - coding - G.722 - Application to audio coding - MREC audio Silvers	Application	on to	spee	ch
coding - G.722 - Application to audio coding - MPEG audio - Silence suppression - stechniques - Vocoders.	Speech o	comp	ressi	on
Todadio.				
Unit IV IMAGE COMPRESSION				
Predictive techniques - DPCM_DM - KI_transformDisprets_position_MALL_L_L_L_L_L_L_L_L_L_L_L_L_L_L_L_L_L_		9	+	0
Wavelet based compression: Quad-trees, EZW, SPIHT, JPEG-2000.	ansform -	- JPE	G,	
	<del></del> ·			
Unit V VIDEO COMPRESSION		9	+	^
Video signal representation – Motion compensation – MPEG standards - Motion estimatio family of standards - Motion video compression	n technic	illes -	H 20	31
family of standards - Motion video compression.		ļuoo		,,
Course Outcomes: Tota	ıl (L+T)=	45 P	erioc	ls
Upon completion of this course, the students will be able to:				
CO1 : Code information using various Lossy and Lossless methods.				
CO2   Apply the concepts dictionary based coding techniques				
CO3   :   Do various analysis on audio compression				
CO4 : Implement image and video compression				
		<del></del>

Behavi	our of Passive Compone	nts: High Frequency Resistors, High Frequency Capacitors,	Dimensions - RF High Frequency
Unit II	RF DEVICE AND CI	RCUIT	9 + 0
Course Objectives:  1. To enable the student to understand the various components that constitute RF and Microwave system 2. To enable the student to understand the working concepts of RF active components and amplifiers 3. To expose the student to know the basic analysis techniques needed for evaluating the performance of an RF system for various applications  1. INTRODUCTION 1. INTRODUCTION 1. INTRODUCTION 1. Importance of RF and Microwave Concepts and Applications- and Units Frequency Spectrum, Dimensions - RF Behaviour of Passive Components. High Frequency Resistors, High Frequency Capacitors, High Frequency Resistors, High Frequency Capacitors, High Frequency Resistors, Prepared Capacitors, High Frequency Capacitors, High Frequency Resistors, Prepared Capacitors, High Frequency Capacitors, RF oscillator design, Iow noise amplifier design, high power amplifier design, stability considerations, RF oscillator design one — port and two — port negative resistance oscillators - oscillators design using large — signal measurements, RF Mixer Design: Single ended mixer — double ended mixer — double ended mixer.  1. Unit III RF PASSIVE COMPONENTS AND TRANSMISSION LINE ANALYSIS 9 + 0 High Frequency Components. Resistors: capacitors and inductors; Transmission line analysis - line equation-microstrip line - SWR - Voltage reflection co - efficient - propagation constant - phase constant - phase velocity - Smith chart - parallel RL and RC circuits.  1. Unit IV RF FEEDBACK SYSTEMS AND POWER AMPLIFIERS 9 + 0 High Frequency Comman model — Class A, AB, B, C, D, E and F amplifiers — power amplifier linearization techniques - efficiency boosting techniques - ACPR metric-design considerations.  1. Unit IV PLL AND FREQUENCY SYNTHESIZERS 9 + 0 High Frequency Synthesizers — Direct Digital Fr

HIGH PERFORMANCE NETWORKS			I"	
18COE43   HIGH PERFORMANCE NET WORKS	L	T	Р	С
	3	0	0	3
Course Objectives:				
To know the different types of networks				
2. To describe the VOIP system				
To study VPN remote Access				
Unit I TYPES OF NETWORKS		9	+	0
Types of Networks, Network design issues, Data in support of network design. Network design and architecture. Streaming stored Audio and Video, Best effort service, protocols for rea applications, Beyond best effort, scheduling and policing mechanism, integrated service differentiated services.	l time	inte	erac	tive
Unit II VOIP SYSTEM		9	+	0
VolP system architecture, protocol hierarchy, Structure of a voice endpoint, Protocols for the	ranei			, -
media over IP networks. Providing IP quality of service for voice, signaling protocols for VoIP, gateways, VoIP applications.  Unit III VPN-REMOTE-ACCESS		9	+	0
VPN-Remote-Access VPN, site-to-site VPN, Tunneling to PPP, Security in VPN. MPLS op	eratio	on, F	₹out	ing,
Tunneling and use of FEC, Traffic Engineering, MPLS based VPN, overlay networks-P2P cor	inecti	ons		
Unit IV TRAFFIC MODELING		9	+	0
Traffic Modeling: Little's theorem, Need for modeling, Poisson modeling, Non-poisson	node			
performance evaluation.			10(1)	
Unit V NETWORK SECURITY AND MANAGEMENT		9	4	0
Network Security and Management: Principles of cryptography, Authentication, integrity, ke	v dist	<u> </u>	ion	J
certification, Access control and fire walls, attacks and counter measures, security in many lay for network management, The internet standard management framework – SMI, MIB, SNI administration, ASN.1.	ers.lr	ıfras	truc	ture
Total (L	.+T)=	45 I	Peri	ods
Course Outcomes:				
Upon completion of this course, the students will be able to:				
CO1 : Apply knowledge of mathematics, probability, and statistics to model and analyze s Networking protocols.	ome			
CO2 : Design, implement, and analyze computer networks.				
CO3 : Identify, formulate, and solve network engineering problems.				
CO4 : Show knowledge of contemporary issues in high performance computer networks.

		18COE51	COGNITIVE RADIO	L	T	P C	
Cour	se Ωh	iectives:		3	0	0 3	
Course Objectives:							
1.	. To enable the student to understand the requirements in designing software defined radios and cognitive radio and its functionalities						
2.	To enable the student to understand the evolving paradigm of cognitive radio communication and the enabling technologies for its implementation.						
3	То	expose the student to th	e evolving next generation wireless networks and their associate	ed o	hall	enges.	
Unit I		Cognitive realist Const			9	+ 0	
Hardy	ation,	Cognitive radio, Speci	rum policy, Data explosion, Applications, Cognitive radio no derations, Spectrum coexistence, Prototyping and Standardiza	etwo	ırk c	tesign,	
radio	netwo	irk paradigms, Spectrun	derations, spectrum coexistence, Prototyping and Standardizants	ition	, Co	gnitive	
		, , , , , , , , , , , , , , , , , , , ,					
Unit I		SDR ARCHITECTURI			9	+ 0	
Softw	are D	efined Radio: Evolution	- essential functions of the Software Defined Radio - archi	lecti	ıre ç	goals -	
quant	ifying	degrees of programma	bility - top level component topology - computational propertie	s of	fun	ctional	
comp	onent	s - interface topologies a lems faced by SDR.	among plug and play modules - architecture partitions - merits a	ind (	met	erits of	
SDK.	· prop	iems laced by SDR.					
Unit l	11	CR ARCHITECTURE			9 T	+ 0	
			ctures, Topology - Aware CRN Architectures, Publish-Si	ıbsc			
Archit						0/	
Unit l		CRN SECURITY			9	+ 0	
Prima	ry use	er emulation attacks - se	curity vulnerabilities in IEEE 802.22 - security threats to the ra	dio s	oftw	лаге.	
Unit \	/	NEXT GENERATION	WIRELESS NETWORKS	Т	9	+ 0	
The >	G Ne	twork architecture, spec	trum sensing, spectrum management, spectrum mobility, spe	ctru	m sł	naring,	
upper	layer	issues, cross – layer de	sign.				
Cour	e Ou	tcomes:	Total (L+	<u> </u> )=	45 P	eriods	
			ne course, the students will be able to				
CO1	:	Understand the conce	ots and design of cognitive radios.				
CO2	:	Study about the SDR a	architecture and analysis.				
CO3	:	Analyse the various co	gnitive radio network architectures				
CO4	:	Study the impact of the	e evolved solutions in future wireless network design.

18COE52   INTERNET OF THINGS	3 0	P   0	C 3
Course Objectives:	3   0	0	-
To understand the fundamentals of Internet of Things and its protocols.			
To build a small low cost embedded system using Raspberry Pi.			
To apply the concept of Internet of Things in the real world scenario.			
Unit I INTRODUCTION TO IOT	9	+	0
Internet of Things – Physical Design – Logical Design – IoT Enabling Technologies –IoT Leve Templates – Domain Specific IoTs – IoT and M2M – IoT System Management with NETO Platforms Design Methodology	els and Dep CONF-YAN	oloym IG –	ent loT
Unit II OT ARCHITECTURE	9	+	0
ETSI M2M architecture – IETF architecture for IoT – OGC architecture – IoT reference mod – Information model – Functional model – Communication model – IoT reference architecture	lel – Doma		-
Unit III   IOT PROTOCOLS	9	+	0
Protocol Standardization for IoT – Efforts – M2M and WSN Protocols – SCADA and RFID		- Uni	fied
Data Standards - Protocols - IEEE 802.15.4 - BACNet Protocol - Modbus - Zigbee Arch layer - 6LowPAN - CoAP - Security			
Unit IV BUILDING IOT WITH RASPBERRY PLAND ARDUINO	9	+	0
Building IOT with RASPERRY PI – IoT Systems – Logical Design using Python – IoT Ph		•	
Endpoints – IoT Device – Building blocks – Raspberry Pi-Board – Linux on Raspberry Interfaces – Programming Raspberry Pi with Python – Other IoT Platforms – Arduino.	Pi - Ras	berry	/ Pi

Head of the Department

Electronics and Communication Engineering Government College of Engineering Salem - 636 011

	18COE53 VLSI for Wireless Communication	L	T	PC
		3	0	0 3
	Obi4:			
	o Objectives: To understand the concepts of basic wireless communication concepts.			
2	To study the parameters in receiver, low noise amplifier design and various types of mixe	re d	ociar	and for
	wireless communication.		•	
3	To study and design PLL and VCO and to understand the concepts of transmitters and p	owe	ram	plifiers
	in wireless communication.			
Ilmit I	MIDEL ESS COMMUNICATION CONCERTS		_ T	
Unit I	WIRELESS COMMUNICATION CONCEPTS ction – Overview of Wireless systems – Standards – Access Methods – Modulation schel		9	+ 0
channe	I – Wireless channel description – Path loss – Multipath fading – Standard Translation.	nes	– Cla	issical
	. This is a stantial description of day loos manipath lading - Standard Hansiation.			
Unit II	RECEIVER ARCHITECTURE AND LOW NOISE AMPLIFIERS		9	+ 0
Receive	er front end – Filter design – Non-idealities – Design parameters – Noise figure and Input	inte	cept	point.
LNA Int	roduction – Wideband LNA design – Narrow band LNA design: Impedance matching and	Cor	e am	plifier.
11-44 111	MIVEDO			
Unit III	MIXERS  ng Mixer - Qualitative Description of the Gilbert Mixer - Conversion Gain - Distortic		9	+ 0
	ete Active Mixer - Switching Mixer – Distortion, Conversion Gain and Noise in Unbala			
Miver	A Practical Unbalanced Switching Mixer - Sampling Mixer - Conversion Gain, Distortion	ncea	SWI	tching
	c Noise in Single ended sampling Mixer.	n, in	trins	ic and
LAURISI	e Moise in Onigie ended sampling Mixer.			
Unit IV	FREQUENCY SYNTHESIZERS		9	+ 0
	Phase detector – Dividers – Voltage Controlled Oscillators – LC oscillators – Ring Osci	llator	<u> </u>	Phase
noise –	Loop filters and design approaches – A complete synthesizer design example (DEC	r) –	Frea	uencv
synthes	izer with fractional divider.			
11-41/	TO A MODELLE TO A DOUBLE OF THE POWER OF THE			.,
Unit V	TRANSMITTER ARCHITECTURES AND POWER AMPLIFIERS itter back end design – Quadrature Local Oscillator generator – Power amplifier design.		9	+ 0
Hansii	nto back end design – Quadrature Local Oscillator generator – Power amplifier design.	<del></del>		
	Total (L+	Γ)= 4	5 Pe	riods
Course	Outcomes:		-	
Upon c	ompletion of this course, the students will be able to:			
CO1	Understand the fading concepts			
CO2	Design Low Noise amplifier and Mixers			
CO3	Evaluate the performance of Frequency synthesizers			
CO4	Design and analyze Power amplifiers

Time Series Analysis, Data Fusion and GIS								
Unit V CASE STUDY: APPLICATIONS OF REMOTE SENSING		т						
Introduction, Land Use/Land Cover Mapping, Geologic and Soil Mapping Agricultura	l Annli		9	+	0			
Applications, Rangeland Applications, Water Resource Applications, Snow and Ice A	oplica:	tions	ııs, ı Uri	an a	and I			
Regional Planning Applications, Wetland Mapping, Wildlife Ecology Applications Archa	eologic	al A	pplic	ation				
Total (L	.+T)= 4	15 P	Prioc	s				
Course Outcomes:								
Upon completion of this course, the students will be able to:  CO1 : Understand the basics of remote sensing systems.								
CO2 : Apply image processing techniques in the area of remote sensing								
CO3 : Extract and analyse thematic information using image analysis techniques								
CO4 : Implement various remote sensing applications using the learnt technique.

	WAVELET SIGNAL PROCESSING	L	T	P	С		
		3	0	0	3		
COURSE OB	JECTIVES:						
	pose the students to the basics of wavelet theory.						
	strate the use of wavelet processing for data compression.						
<ol> <li>To ex</li> </ol>	pose the students to use the wavelet processing for noise suppression.						
Unit I	Windowed Fourier transform		9	+	0		
	standard Fourier analysis. Windowed Fourier transform. Continuous wavelet tran	nstorr	n.				
Time-frequen	cy resolution.						
Unit II	Wavelet transform		9	+	0		
	cs. Balian-Low theorem. Multiresolution analysis. (MRA). Construction of wavelets	fron		A. F	-		
wavelet algori							
Unit III	Wavelet packets		9	+	0		
	pported wavelets. Cascade algorithm. Franklin and spline wavelets. Wavelet pack						
	frames. Frame representation. Representation of signals by frames. Iterative reco	onstr	uction	٦.			
Frame algorit	nm.						
1.5 74 13.7					10		
Unit IV	Noise suppression		9	+	] 0		
	ods for signal processing. Noise suppression. Representation of noise-corrupted in the form reconstruction from corrupted frame representation.	signa	ais us	smy			
iranies. Aigor	idiliti for reconstruction from corrupted frame representation.						
Unit V	Wavelet methods for image processing		9	+	0		
	ods for image processing. Burt- Adelson and Mallat's pyramidal decomposition so	chem			1 -		
dyadic wavelet transform.							
dyadic wavele	et transform.						
dyadic wavele	et transform.

18COE63 BIO MEMS	L	T	P	С
ANALYSIS .	3	0	0	3
COURSE OBJECTIVES:				
To train the students in the design aspects of Bio MEMS devices and Systems.				
To make the students aware of applications in various medical specialists.      To make the students aware of applications in various medical specialists.      To make the students aware of applications in various medical specialists.	-			
3. To aware the students to compare the conventions methods and Bio MEMS usage	ł.			
Unit I BIO MEMS-INTRODUCTION AND FABRICATION		9	1 -	0
Introduction-The driving force behind Biomedical Applications – Biocompatibility - Relia	bility C		 eratio	
Regularity Considerations – Organizations - Education of Bio MEMS-Silicon Micro fabric techniques				
Unit II MICRO FLUIDIC PRINCIPLES		9	+	0
Introduction-Transport Processes- Electro kinetic Phenomena-Micro valves -Micro mixers	- Місго	pump	S.	
Unit III SENSOR PRINCIPLES and MICRO SENSORS		9	+	0
Introduction-Fabrication-Basic Sensors-Optical fibers-Piezo electricity and SAW de detection-Applications in Medicine.	vices-E	lectro	chem	ical ——
Unit IV MICRO ACTUATORS and DRUG DELIVERY		9	T +	0
Introduction-Activation Methods-Micro actuators for Micro fluidics-equivalent circuit represe	ntation-		Deliv	1 -
Unit V MICRO TOTAL ANALYSIS		9	+	0
Lab on Chip-Capillary Electrophoresis Arrays-cell, molecule and Particle Handling-				
Microsphere-Cell based Bioassay Systems. Detection and Measurement Methods-E	mergin	g Bìo	ME	MS
Technology-Packaging, Power, Data and RF Safety-Biocompatibility, Standards.				
Total (L+T)= 45 Periods				
Course Outcomes:				
Upon completion of this course, the students will be able to:				
CO1 : Learn and realize the MEMS applications in Bio Medical Engineering.				
CO2 : Understand the Micro fluidic Principles and study its applications.				
CO3 : Learn the applications of Sensors in Health Engineering.				
CO4 : Learn the principles of Micro Actuators and Drug Delivery system and applic Analysis.	ations o	of Micr	о То	al

18	COE64	BIG DATA TECHNOLOGY	L	T	Р	С		
	· · · · · · · · · · · · · · · · · · ·		3	0	0	3		
COL	COURSE OBJECTIVES:							
1.	To learn	the basics of Big Data and concept of map reduce.						
2.	To build a	and maintain reliable, scalable, distributed systems with Apache Hadoop.						
3	To under	stand Hadoop ecosystem components and YARN.						
UNIT	- 1	RODUCTION TO BIG DATA		9	+	0		
		distributed file system – Big Data and its importance, Four Vs, Drivers for Big				data		
anar	ytics, big a	ata applications. Algorithms using map reduce, Matrix-Vector Multiplication by Ma	рке	auc	e.			
UNI		RODUCTION TO HADOOP		9	+	0		
		che Hadoop & Hadoop EcoSystem – Moving Data in and out of Hadoop – Unde	rstar	nding	gin	outs		
and	outputs of	MapReduce - Data Serialization.						
UNI		OOP ARCHITECTURE		9	+	0		
		ecture, Hadoop Storage: HDFS, Common Hadoop Shell commands , Anatomy o						
		ode, Secondary NameNode, and DataNode, Hadoop MapReduce paradigm, M						
		k trackers - Cluster Setup – SSH & Hadoop Configuration – HDFS Administerin	g –N	1onit	torir	ıg &		
iviair	tenance.							
LIMI	TIV HAD	OOP ECOSYSTEM AND YARN	$\overline{}$	9	+	0		
	i	stem components - Schedulers - Fair and Capacity, Hadoop 2.0 New Features- N	ame	- 1		1 - 1		
		FS Federation, MRv2, YARN, Running MRv1 in YARN.	anio		u0 1	יישיי		
	•				<del></del>			
UNI	TV HIVE	AND HIVEQL, HBASE	$\neg$	9	+	0		
Hive	Architectu	re and Installation, Comparison with Traditional Database, HiveQL - Querying Da	ta -	Sort	ing .	And		
		lap Reduce Scripts, Joins & Subqueries, HBase concepts- Advanced Usage, S						
		ing - PIG, Zookeeper - how it helps in monitoring a cluster, HBase uses Zookee	per	and	hov	w to		
Build	d Application	ns with Zookeeper.						
201	IDOE OUT	Tota	1 = 1	45 P	eric	ods		
	JRSE OUT							
CO1		on of this course, the students will be able to: erstand basics of Big Data and map reduce						
CO2		erstand HADOOP architecture		<del></del>				
CO3		yze the HADOOP Ecosystem and YARN						
CO4		erstand the basics of HIVE,HIVEQL,HBASE
